Profile

Backend developer specializing in Python and FastAPI, focused on building scalable REST APIs and backend services. Experienced with PostgreSQL, Docker, authentication systems, and layered application architecture. Interested in backend architecture, distributed systems, scalability, and performance optimization.

Skills

Backend Python, FastAPI, REST API development, asynchronous programming
Databases PostgreSQL, SQL, transactions, joins, indexing
ORM SQLAlchemy, Alembic
DevOps Docker, Docker Compose, environment configuration
Authentication JWT, access/refresh tokens, protected routes
Tools Git, GitHub, Linux, API documentation
Languages English (B1–B2), German (learning)

Projects

Task Manager API, *Personal Project*

- Designed and developed a RESTful task management API using FastAPI
- Implemented JWT-based authentication system with registration, login, token refresh, and protected endpoints
- Structured backend using layered architecture (routers, services, repositories)
- Integrated PostgreSQL database using SQLAlchemy ORM
- Managed database schema and migrations with Alembic
- Containerized application and database using Docker and Docker Compose
- Implemented transaction management and error handling for reliable database operations
- Documented API endpoints using OpenAPI / Swagger

Stack: FastAPI, PostgreSQL, SQLAlchemy, Docker, JWT, Alembic
