Profile

Junior Software Engineer (Python Backend) with hands-on experience in building backend systems, REST APIs, and data processing applications.

Developed production-style personal projects including authentication systems, document processing pipelines, and automation tools using FastAPI, PostgreSQL, and Docker.

Comfortable working with Python, databases, APIs, Docker, and Linux-based environments.

Open to Junior Backend, QA Automation, and Software Engineering roles in Germany.

Technical Skills

Programming	Python (primary), C++ (1+ year experience, problem-solving and algorithmic development), basic Bash
Backend	FastAPI, REST APIs, authentication, asynchronous processing
Backend	Layered architecture (routers, services, repositories), background workers
Architecture	
Databases	PostgreSQL, SQL, SQLAlchemy, Alembic
Testing	Pytest, unit and integration testing, API testing
DevOps	Docker, Docker Compose, Linux
Tools	Git, GitHub, Swagger / OpenAPI
AI & Automation	OpenAI API, PDF processing, background workers, document pipelines
Languages	English — B1 (technical reading and writing), German — A1 (currently studying)

Projects

2026 Task Manager System, Backend Development Project

- Developed a REST API for task management with authentication and role-based access control
- Implemented JWT authentication and protected API endpoints
- Structured the application using routers, services, and repository layers
- Integrated PostgreSQL using SQLAlchemy ORM and Alembic migrations
- Implemented validation, pagination, error handling, and transaction management
- Wrote unit and integration tests with Pytest
- Containerized the application using Docker and Docker Compose
- Prepared API documentation with Swagger / OpenAPI

Tech stack: Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker, JWT, Pytest

2026 **DocFlow AI — Document Processing Platform**, *Backend Document Processing System*

- Developed a platform for uploading, storing, and processing PDF documents
- Implemented asynchronous background workers for document processing tasks
- Designed a state-based processing workflow (pending, processing, completed, failed)
- Integrated PDF text extraction and OpenAI API for automated summarization
- Separated API, worker, and database components for scalability and maintainability
- Managed file storage and PostgreSQL persistence layer
- Containerized the system with Docker Compose

Tech stack: Python, FastAPI, PostgreSQL, Docker, OpenAI API, background workers, PDF processing

Education

2025–present **Master's in Applied Informatics (in progress)**, *International Moscow Academy*

2021–2025 **Bachelor's in International Management**, *Russian University of Transport (MIIT)*

Recognized in Germany (Anabin H+)

Additional Training: **Data Analytics**, *Professional Retraining Program*
